The sliding fee schedule is used to determine the cost to the client once enrolled to receive services. To read the schedule, locate the box across the top in which your monthly income falls, and scroll down to match it with your personal asset total in the left column. This is your cost share percentage.

- For consideration:
1. Medical expenses are deducted from monthly income. Examples of assets include checking or savings accounts, secondary property, stocks, bonds, IRAs, etc.
 2. Income and assets for a married couple will be divided by two.
 3. Financial verification is required.
 4. Final cost determination is made by the assigned care consultant during initial assessment.
